

PRESS RELEASE

COIL POSTPONES PUBLICATION OF 2012 HALF-YEAR RESULTS

Brussels, September 24, 2012 (5:45 pm) - COIL, the world leader for aluminium anodising, decided to postpone the date of the Board of Directors for approval of the 2012 first half accounts. The publication of 2012 half-year results, originally scheduled for September 25, is shifted to October 25, 2012 after close of trading.

COIL is the world's largest architectural and industrial anodiser.

Anodising is an electrochemical process - electrolysis - that develops a natural and protective exterior layer on aluminium that can be coloured, providing exceptional corrosion protection and/or increased functionality for the metal.

Anodising preserves all the natural and ecological properties of aluminium - it retains its high strength-to-weight ratio, non-magnetic properties and exceptional corrosion resistance without any impact on the total and repeated recyclability of the metal.

Anodised aluminium is used across a wide range of architectural, designer, industrial and automotive applications.
